

Varsity Package

We created the Varsity Package because we wanted it to have all the accessories that we felt every customer needs in one simple package.

This package is only available on the compact, 5 ft. wide frame. It includes the Folding Stand & Wheels to move the frame, the Stop, Bar & Measuring Tapes, a Dual Rip Gauge, Dust Brush, Hose and a 40 tooth all purpose blade.

Folding Stand & Wheels

The folding stand can be folded from the front like a ladder. When the machine is tilted vertically the weight shifts to two big 5" wheels. The machine can then be moved easily into cutting position or out of the way for storage. Attached at factory.

Dual Rip Gauge

Stop, Bar & Tapes

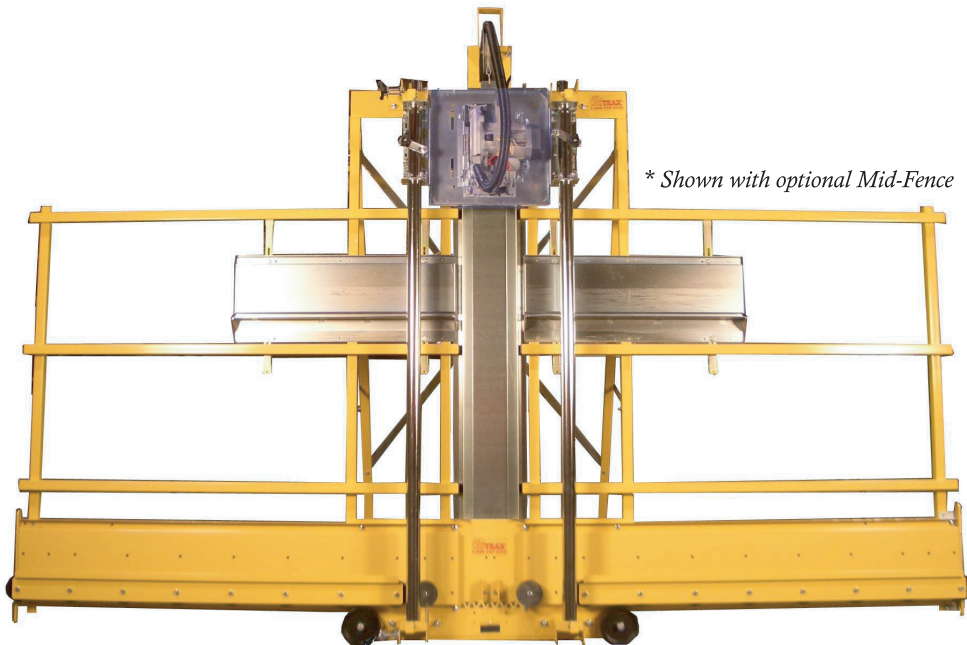

For fast and easy set up of length wise cuts or ripping in both directions. Tension spring on bottom keeps tape tight for easy reading.

Quickly measure and make repetitive cuts on either side of the saw blade. Saves you time and money. Bar allows you to cut thin strips using stop.

1000 Series

** Shown with optional Mid-Fence*

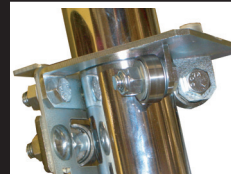

The 1000 Series includes the Varsity Package with a saw motor bracket and a fullsize, 10 ft. wide frame. This more professional machine is ideal for fully supporting material, making any cut easier. The motor bracket takes out any possible movement of the saw on its shoe, providing more accuracy

Dust Brush

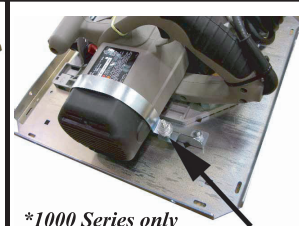

A dust brush is attached under the carriage to help channel the dust into the hose.

Sealed Bearings

So smooth, it takes almost no effort to move. They make the job easier while you maintain the accuracy you need.

Motor Bracket

**1000 Series only*

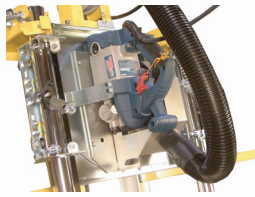

This bracket takes out any possible play in the saw and keeps the saw rock solid at all times.

2000 Series

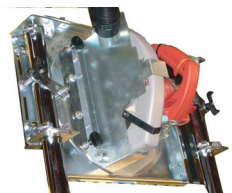

"BULLET PROOF"
For Heavy Duty Industrial Use

Bosch Worm Drive

This heavy duty machine includes everything listed to the right plus the Bosch 15 amp. worm drive saw (more powerful version of the 13 amp. found on competitors model), mounted on a spinning insert, with a dust hood and hose and a 40 tooth all purpose blade.

10" Milwaukee 6460

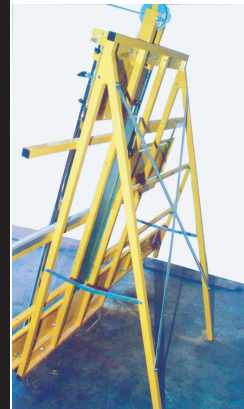

This full size panel saw has a deeper cut, perfect for trimming doors. It enables you to use the 10" specialty blades you already have for cutting melamine, veneers and hardwoods. Includes everything listed to the right plus a Milwaukee 6460, mounted on a spinning insert, with a dust hood and hose.

3000 Series

Folding Stand & Wheels

The folding stand can be folded from the front like a ladder. When the machine is tilted vertically the weight shifts to two big 5" wheels. The machine can then be moved easily into cutting position or out of the way for storage. Attached at factory.

Dual Rip Gauge

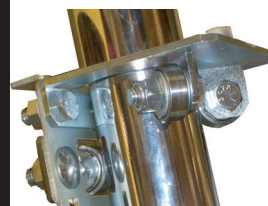

For fast and easy set up of length wise cuts, or ripping in both directions. Tension spring on bottom keeps tape tight for easy reading.

Stop, Bar & Tapes

Quickly measure and make repetitive cuts on either side of the saw blade. Saves you time and money. Bar allows you to cut thin strips using stop.

Sealed Bearings

So smooth, it takes almost no effort to move. They make the job easier while you maintain a greater cutting accuracy.

Steel Sleeved Rollers

Our material roller is inserted into an 1/8" sleeve of steel to eliminate the worry of material rollers cracking or breaking.

Dust Brush

A dust brush is attached under the carriage to help channel the dust into the hose.
