

WHEEL KIT & LOCK CLIPS

When moving oversize objects up ramps or across uneven surfaces, such as curbs, adding the Wheel Kit and Lock Clips can be used for additional support and leverage when approaching the obstacle. The Wheel Kit and Lock Clips are designed to be used with the existing 56" posts.

Contents:

Qty 4 locking clips with hardware

Qty 2 caster wheel kits with mounting brackets and hardware.

Lock Clip:

The Lock Clip is added to the each side of the support posts the caster bracket will be mounted to. Use 2 clips per post. The clips mount onto the posts on each side of the dolly body where the post exits the horizontal mounting location in the cart body. Tighten the clip in place using the included wing nut. Do not place the clip against the dolly but rather leave 1/2 inch of space between the dolly and the clip. The Lock Clips function is to hold the post in place and keep it from being pulled into or out of the body of the dolly.

Wheel Kit:

The Wheel kit mounts to the outside end of the post. Slide the bracket with the caster over the end of the tube and tighten the wingnuts to hold the wheel in your desired location.
