

Vertical Panel Saws

2000 Series

Makita Saw on Spinning Insert + Dust Collection

Sealed Steel Roller Bearings

Steel Sleeved Material Rollers

Stop Block with Bar

Product Description:

The 2000 Series panel saws include a heavy duty Makita Hypoid saw. This 15 amp. saw has similar power to a worm drive saw without the need to constantly change the oil that lubricates the bearings. This machine is designed for production shops that are cutting 50 or more sheets a week or very hard material. Steel sleeves over the rollers act as armor to protect the plastic rollers from cracking. This series is ideal for customers that need to break down sheet goods up to 1 $\frac{3}{4}$ inch thick with precision cuts.

Standard features include the saw on a Spinning Saw Insert Plate, a robust dust collection system, an easy to open & close folding stand for complete stability while in use, and steel sleeves to prevent damage to the material rollers. This 10ft. frame provides an unlimited rip cut capability.

AVAILABLE FULL SIZE MODELS

52" Cross Cut **#2052**
64" Cross Cut **#2064**
76" Cross Cut **#2076**
