

Bucket Pusher

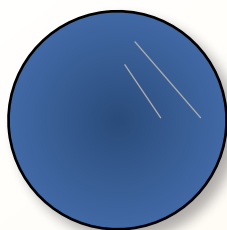

Heavy-Duty Push Tool for Buckets, Containers & Stacked Inventory

The **Bucket Pusher** is engineered to safely push, shift, and separate stacked 5-gallon buckets without bending, prying, or risking injury. Built from reinforced steel and fiberglass, it provides controlled forward leverage for paint stores, contractors, janitorial crews, and warehouse teams. The ergonomic pole design keeps hands away from pinch points, while the powder-coated finish ensures long-term durability in demanding environments.

ACTIVATION CURVE

Side prongs are designed to be misaligned with the bucket's curve when flat on the floor.

Upon lifting, they align and lock into the bucket's shape, activating a mechanism for secure, controlled movement.

This **prototype head** is sold separately as we test market demand. It offers the same ergonomic crescent design in a lightweight 3-D printed form: ideal for early adopters + field testing.
